

Proceso de fabricación de la porcelana

Resistencia

La porcelana vitrificada tiene un alto contenido de alúmina lo que confiere un extrema dureza y resistencia al desportillamiento

DURABILIDAD

La especial fórmula de nuestro esmalte lo hace adecuado para el uso extremo en restauración por su gran resistencia al golpeo, la abrasión y los detergentes

microondas

Los productos vitrificados Continental pueden ser utilizados de forma segura en hornos microondas ya que no contienen metales preciosos es su esmalte o decoración

Higiene

La porcelana vitrificada Continental es impermeable al agua. La esmaltación de la base de las diferentes piezas evita las absorción de agua y otros materiales

customización

Ofrecemos la posibilidad de personalizar el producto con su logo y otros decorados

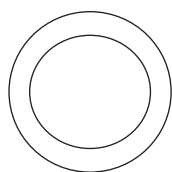

Calidad

Continental utiliza los principios ISO-9002 para asegurar la consistencia del producto a través de estándares desarrollados a lo largo de muchos años de liderazgo en el sector

FINE BONE CHINA

La porcelana Fine Bone China presenta al menos un 30% de polvo de cenizas de hueso en su composición. Esto le aporta un característico y agradable color marfil, una dureza similar a la porcelana clásica y una ligereza y transparencia insuperable.

CAZUELA REFRACTARIA

Es un material resistente a la llama directa y al horno.

- Su esmalte es altamente resistente.
- Tiene un bajo coeficiente de dilatación térmica.

Las instrucciones de uso para el óptimo aprovechamiento de estas cazuelas son :

- No poner nunca a la llama sin aceite ó líquido en la base.
- No añadir nunca líquidos fríos durante la cocción.
- Evitar los cambios de temperatura bruscos.
- Una vez finalizada la cocción, no poner la pieza caliente sobre una superficie fría ó mojada.
